

UNLIMITED REELS FROM CODE

One Claude skill, HyperFrames, turns HTML into real video. No AI video model, no credits per clip, any style you can describe.

AI video model

You pay per clip and wait for each one. The look is hard to control.

Reels from code

Claude writes the HTML and animation. It renders frame by frame into an mp4.

Note: "unlimited" means no per-clip credit cost. You still need your Claude plan, and a computer with Node, ffmpeg and Chrome to render.

Get HyperFrames

- 1 **Open the repo.** It is free and open source (Apache-2.0).

`github.com/heygen-com/hyperframes`

- 2 **Check you have the tools.** Node, ffmpeg and Chrome (the skill renders in a browser).

- 3 **Give Claude the link.** Paste the GitHub link into Claude and ask it to install the skill and read its README.

Install the HyperFrames skill from `github.com/heygen-com/hyperframes` and tell me how to use it.

- 4 **Ask for a reel.** Describe the style and topic, and Claude writes the HTML and renders it to video.

Try these prompts

Explainer: Make a 30-second vertical reel in HyperFrames explaining [topic], with big kinetic text, a hook in the first 2 seconds and my handle at the bottom.

Style: Make it in a dark code-editor style with orange accents. No letter-by-letter text, only smooth motion.

Voice sync: Here is my voiceover audio and its script. Time each scene to the spoken words so nothing drifts.

Real assets: Use real logos and screenshots of the tools I mention, not placeholder boxes.

Outro: End with a "Follow @yourhandle for more" card and an animated Follow button.
