

YOUTUBE AGENT **SKILL**

Eleven free Claude skills that help you run a YouTube channel: scripts, edits, comments, planning and more. Set it up in about 10 seconds.

/yt-script

/yt-package

/yt-edit

/yt-comment

/yt-plan

/yt-viral

/yt-retention

/yt-shorts

/yt-seo

/yt-chapters

/yt-audit

Good to know

Nothing is posted for you. Claude drafts, you review and upload. Needs Claude Code and Python 3, and no YouTube API key.

What each command **does**

/yt-script

Script. Turns one idea into scored hooks and a full script with retention beats. The video shows 21 hook formulas, like #3 The Mistake and #7 The Secret.

/yt-package

Title + thumbnail. Checks your title and thumbnail text together for truncation, repetition and vagueness.

/yt-edit

Edit list. Makes a timecoded edit list of dead air, filler words and retakes from your transcript.

/yt-comment

Comments. Sorts comments into four groups, drafts replies in your voice and suggests one to pin.

/yt-plan

Weekly plan. Plans your week around your free hours: one main video, one quick video and three Shorts.

/yt-viral

Viral finder. Ranks videos in your niche by how much they beat their own channel's usual views.

/yt-retention

Retention. Reads your retention export, finds where viewers drop off and suggests fixes.

/yt-shorts

Shorts. Finds Short-worthy clips in a long video and writes a new opening line for each.

/yt-seo

SEO. Drafts the description, tags and three search queries to target.

/yt-chapters

Chapters. Builds chapters from a transcript and checks them against YouTube's rules.

/yt-audit

Channel audit. Reviews your whole channel and ends with one recommended fix.

Set up in a few steps

- 1 **Install the skills.** Open Claude Code, paste the repo link and ask it to install the skill. Or use the plugin commands:

```
/plugin marketplace add Jakeschincariol/youtube-agent-skill  
/plugin install youtube-agent
```

- 2 **Make your voice file.** Copy `templates/voice.md` to `~/.claude/youtube/voice.md` and fill it in. Or give Claude transcripts of three of your videos and ask it to draft the file for you to review.
- 3 **Test a script.** Run `/yt-script` with a topic, length, audience and language.
- 4 **Plan your week.** Run `/yt-plan` with your free hours, niche and publishing days.
- 5 **Review and upload yourself.** Nothing is posted automatically.

EXTRA HELPERS

The repo also has small Python tools: `hookscore.py`, `title.py`, `deadair.py` and `chapters.py`. They need only Python 3, no extra libraries.
