

CLAUDE CODE SKILLS

Teach Claude your taste once, and get the same quality in every project.

AI-built interfaces often look alike: same fonts, same gradients, same cards. The AI does not know **your** taste. A skill is how you tell it, once.

WHAT IS A SKILL?

A **folder** with a `SKILL.md` file. Inside: a name, a short description of **when to use it**, and the instructions for **how to work**. Claude reads the description and picks the skill when your task matches.

Lives in `~/.claude/skills/<name>/` (personal) or `.claude/skills/<name>/` (one project).

EXAMPLE: DESIGN RULES

```
---
name: design-rules
description: Use when building or editing any UI page
---
- Fonts: Inter for text, one display font for headings
- Colors: black, white and one accent only
- Spacing: use an 8px grid
```

3 SKILLS TO START WITH

Skill	What it does
design-rules	Your fonts, colors and spacing, applied to every page
polish	Before shipping: checks alignment, spacing and contrast
animation	Motion that is smooth and has a purpose, never forced

TRY IT YOURSELF

1. Create `.claude/skills/design-rules/SKILL.md`
2. Ask Claude Code to build a landing page
3. Compare it with a page built without the skill

WRITE IT ONCE, USE IT EVERYWHERE
